SUMMARY

DevOps, Platform and SRE engineer with 5+ years building and operating production platforms on AWS, GCP and Kubernetes. Built, solo, a bring-your-own-cloud deployment platform that installs 40-45 microservices into a customer's own cloud account in 45 minutes, and an AI-assisted incident response system on Amazon Bedrock. Runs 12 EKS clusters hosting 270+ microservices and leads a 4-engineer DevOps team. Focused on reliability, observability, cost efficiency and security.

EXPERIENCE

Nielsen · Bangalore, India

Senior DevOps Engineer Jun 2025 - Present

- Built, solo, a bring-your-own-cloud deployment platform that provisions a customer's AWS or GCP account (VPC, EKS, RDS, DynamoDB, S3) with Pulumi, installs Argo CD and Karpenter, and deploys 40-45 microservices from a single config file; end-to-end installs and upgrades take 45 minutes instead of 6-7 hours, with 4 customers live in production.
- Designed and built AI incident response: Prometheus alerts from 12 EKS clusters trigger Amazon Bedrock models grounded in a Bedrock Knowledge Base of runbooks and docs, which remediate common failures such as OOM kills automatically and route the rest to on-call through incident.io with a diagnosis attached.
- Self-host two open-weight small language models on EKS as a fleet managed by a custom Kubernetes CRD, at ~4x lower inference cost than managed APIs.
- Run 12 EKS clusters hosting 270+ microservices: zero-downtime upgrades from v1.32 to v1.34, NodeLocalDNS, Node Problem Detector, registry proxy cache and blue-green deployments; enabling node memory swap cut OOM kills ~70%.
- Cut AWS spend by ~$1,800/month by consolidating 20+ ALBs behind NGINX Ingress across 50+ services, and ~30% of compute cost by migrating to Graviton with multi-arch builds and Karpenter right-sizing.
- Built from scratch and took to production the infrastructure for a real-time Ads platform targeting sub-10 ms responses, using AWS Local Zones and Global Accelerator after evaluating ScyllaDB and Aerospike with vendor teams.
- Built the observability stack (Prometheus, Alertmanager, Loki, Grafana) and rolled out incident.io for alert routing, incident management and on-call rotations.
- Hardened clusters with Kyverno policies (mandatory resource limits, no privileged containers, workload health and autoscaling checks) and Vault dynamic secrets via Kubernetes and AWS STS auth; led CrowdStrike remediation across 15+ AWS accounts by rolling out patched AMIs fleet-wide.
- Lead a 4-engineer DevOps team supporting 5-6 application teams including Ads and Sports; own GitLab CI, JFrog Artifactory with Vault integration, and a Docusaurus developer portal.

Conga · Bangalore, India

Senior DevOps Engineer Apr 2024 - Jun 2025

- Led a 6-member DevOps/SRE team, setting deployment standards, runbooks and SRE practices.
- Designed KEDA-based autoscaling for NGINX (on Prometheus metrics) and AWS SQS consumers, scaling workers on queue depth instead of fixed replicas.
- Built a SaaS API platform in FastAPI (60+ endpoints) with CI/CD and canary rollouts.
- Built a Python and Celery workflow orchestrator for CRM data migrations with DAG-based dependencies, retries, state tracking and a live dashboard; ran 500+ concurrent workflows with zero data loss.

DevOps Engineer Apr 2023 - Mar 2024

- Automated infrastructure with Terraform for high availability and scaling, cutting release cycles from 2 weeks to 3 hours.
- Deployed the observability stack and Doppler secrets management, cutting MTTR 50%.
- Standardized deployments for React, Angular, Java and Python microservices, cutting deployment time 60%.

Associate DevOps Engineer Jul 2021 - Mar 2023

- Created templatized Helm charts for stateless and stateful services, cutting new-service setup from 4 hours to 2.4 hours.
- Built CI/CD pipelines in Jenkins with Groovy shared libraries and shell tooling; GitOps delivery with Rancher Fleet.
- Wrote reusable Terraform modules for multi-environment infrastructure.

SKILLS

Cloud: AWS (EKS, EC2, ALB, RDS, DynamoDB, S3, SQS, IAM/STS, Bedrock, Local Zones), GCP

Kubernetes: EKS, Karpenter, KEDA, Helm, Argo CD, NGINX Ingress, Kyverno, CRDs and operators, Docker

IaC, GitOps and CI/CD: Pulumi, Terraform, GitLab CI, Jenkins (Groovy), Rancher Fleet, JFrog Artifactory, blue-green and canary releases

Observability and SRE: Prometheus, Alertmanager, Grafana, Loki, CloudWatch, incident.io, on-call, incident management

AI / LLMOps: Amazon Bedrock and Knowledge Bases, self-hosted SLMs on EKS, runbook automation

Security: HashiCorp Vault, Kyverno, AWS STS, Doppler, CrowdStrike

Languages and data: Python (FastAPI, Celery), Go, Bash; Kafka/MSK, Redis, MongoDB, DynamoDB, ScyllaDB, Aerospike

EDUCATION

B.Tech, Computer Science and Engineering, M.S. Ramaiah University of Applied Sciences, Bangalore · CGPA 9.0 Jul 2017 - Jun 2021

CERTIFICATIONS

- Certified Kubernetes Administrator (CKA)
- HashiCorp Certified: Terraform Associate
